Abstract (en)

[origin: WO2009015682A1] The method relates to a floor panel (100), particularly laminate flooring, comprising resin-impregnated, particularly paper layers (10, 11, 13), which are pressed together with a carrier board (12). In order to configure a floor (100) such that a conductive and transparent layer can be positioned in arbitrary locations of the layer sequence of the floor panel (100) for the purpose of achieving an antistatic effect, it is proposed according to the invention to provide at least one layer (10, 11, 13) with conductive and transparent pigments (16).
