Abstract (en)

[origin: EP2169336A2] The device (HK) has a housing (G) comprising side walls (S) and a carrier structure (QT) transverse to the lateral walls. The side walls and the carrier structure are adjoined together at upper and lower edge regions. A three dimensional force distributor (KV) is attached to an outer housing edge, and connects a part of the edge region with the sidewalls, where force induced in to the sidewalls in the carrier structure is led from the distributor. The force distributor is adhered with the sidewalls, and made of plastic such as polypropylene.
