Abstract (en)

[origin: EP2602211A1] The device (1) has a hanger rod (10) to be suspended with a support element (6). A hooking part (8) is mounted movable in rotation around a clevis pin (R) from a suspension part (4) via an articulation device (22). The hooking part is movable between a working position in which the part extends according to a hooking direction (A) perpendicular to a suspension direction (S), and a storage position in which the part extends according to a direction parallel with the suspension direction. The pin is perpendicular to a plane defined by the suspension direction and the hooking direction.
