Abstract (en)

[origin: EP2623276A1] The machine (10) has a lower blade (12) and an upper blade (14) that are moved with respect to each other in a switched-on operating mode of main portion. Friction surfaces (16) are provided between lower blade and upper blade. A distribution element (18) is provided to receive externally and store lubrication oil. The distribution element is set to distribute lubrication oil in switched-on operating mode, so as to lubricate friction surfaces between lower blade and upper blade.
