Abstract (en)

[origin: WO2013079730A1] The invention relates to a lid (100) of a container, in particular of a drinks can, having at least one outlet opening (103), which penetrates the lid (100) and can be reclosed via at least one closure element (120), wherein the at least one closure element (120) is arranged on the underside of the lid (100), and the at least one closure element (120) can be moved, via an actuating element (110) arranged on the upper side of the lid (100), out of a closed position, in which the at least one outlet opening (103) is closed, into an open position, in which the outlet opening (103) is at least partially freed, the at least one closure element (120) has a first sealing means (121), for sealing the at least one outlet opening (103) in relation to the underside of the lid (100), and the actuating element (110) has at least one second sealing means (130), which seals the at least one outlet opening (103) in relation to the upper side of the lid (100).
