Abstract (en)

[origin: WO2013071976A1] The invention relates to a heat accumulator (1), in particular for use in a motor vehicle, comprising a heat accumulator container (2) which can be integrated into the motor oil circuit, through which motor oil (8) flows when the motor (4) is running, and which is disconnected from the circuit when the motor (4) is switched off. The oil pan (3) of the motor (4), in particular the lower part (5) of the oil pan, is provided as the heat accumulator container (2), and the oil pan is provided with heat-insulating container walls (6). In particular, an element for increasing the heat capacity of the heat accumulator is provided.
