Abstract (en)

[origin: WO2014079454A1] The invention relates to a gripping tool (1) for fixing an elongate object (12), such as a pole or a mast. The gripping tool (1) comprises a first gripping device (22) and a second gripping device (23), wherein both gripping devices (22, 23) comprises at least one gripping arm (19) arranged to act on the object (12). The gripping tool (1) further comprises a gripping actuator (24) which is connected to at least one gripping arm (19) of both gripping devices (22, 23) so that the gripping actuator (24) drives the gripping action of both of the first gripping device (22) and the second gripping device (23) and wherein the gripping devices (22, 23) are arranged so that the gripping action of the first gripping device (22) is substantially at least partially independent of the gripping action of the second gripping device (23).
