Abstract (en)

[origin: US6367762B1] A base (80a) for fastening profiled rods (35, 40, 70) is proposed. The base (80a) is comprised of a sole plate (85a) and two walls (90a, 95a) formed onto the sole plate (85a), which are disposed at an angle to each other and at least partially define at least one flat section (130, 185, 210) on the sole plate (85a). The walls (90a, 95a) can be fastened to at least one profiled rod (35, 40, 70). At least one wall (90a, 95a) has a first wall section (100, 110) and a second wall section (175, 180), wherein the respective wall sections (100, 110, 175, 180) define different sized flat sections (130, 185, 210), which are adapted to different sized profiled rods (35, 40, 70). In this manner, one base (80a) can be used for different sized profiled rods (35, 40, 70).
