Abstract (en)

[origin: FR2760826A1] Catering service trolleys for preserving and distributing meal service trays in aeroplanes. Said trolley comprises side walls (28, 30) with double shells defining vertical channels (34) opening at their upper part into the housing (22) containing the refrigerating agent and at their lower part in the proximity of the bottom of the section (26) receiving the meal-trays, thus enabling the refrigerating gas to circulate by convection over the whole height of the trolley and a more homogeneous temperature distribution.
