Abstract (en)

[origin: US6267336B1] A movable armrest is provided which has a floor support, a support element extending upwardly from the floor support, and a trough-shaped armrest member attached to a top end of the support element, the support element being arranged to move the armrest member horizontally relative to the floor support. The support element may be a rigid rod with at least one spring positioned between the rod and the floor support, or may be an elongated spring, such as a torsion spring, a coil spring, a flat spring or a spiral spring. The support element may have a telescoping feature to permit it to be collapsed for storage and a rotatable joint may be provided between the armrest member and the support element.
