Abstract (en)

Junction fittings (18) are provided for connecting the inlet and outlet ports (12) of a water-filled space heating radiator (10) to the usual radiator control valves (16). Each junction fitting incorporates a stop valve (38) which may be manually adjusted between open and closed positions. When it is required to remove a radiator, the two stop valves (38) in the junction fittings (18) are closed, in addition to the main radiator control valves (16). The junction fittings may then be disconnected from the control valves, allowing removal of the radiator, without drainage of water from the radiator. <IMAGE>
