Abstract (en)
[origin: EP0003042A1] 1. Frame profile for the lower transverse frame member or the sill of at least one sliding leaf or panel (24), having at least one rail (23) and with, facing the interior of the room, an inner element (1, 2) and connected therewith in plug-in fashion, an outer element (3, 4), the inner element (1, 2) consisting of a material having a poorer heat conductivity than the outer element (3, 4) characterised in that the outer element (3, 4) engages beneath the inner element (1, 2), the rail (23) is mounted on the inner element (1, 2), its long side (26) which is situated beneath the sliding panel (24) and which is directed towards the interior of the room being at least substantially covered by the inner element (1, 2).
