Abstract (en)  
[origin: EP0031503A2] A magnetic brush development apparatus in which a developer containing magnetic powder therein is attracted to a non-magnetic support member having a magnet (22) therein, and said developer attracted to said non-magnet support member is brought into contact with a latent image bearing member (23) for developing said latent electrostatic image; said magnet has substantially one magnetic pole portion capable of producing a magnetic field having a plurality of peaks in the intensity of said magnetic field in said development section, one magnet (11, 12, 13, 16) including a recess portion being disposed adjacent said non-magnetic support member (10).
