Abstract (en)

A method for finishing of fabrics, in which at least one fabric strand (22) is inserted into a pneumatic conveying pipe (38) supplied with a high speed air flow, so as to drag said strand (22) from a first to a second end of a tank (36) in which said strand (22) collects in a series of movable laps. Said fabric strand (22) is slowed down upstream of said conveying pipe (38), so that the fabric strand (22) advances in the conveying pipe (38) at a speed substantially lower than the speed at which it would be dragged by said air flow in the absence of said slowing down. <IMAGE>
