Abstract (en)

[origin: WO9857096A1] The invention relates to a seal cap for pressurised gas holders, especially for 500 kg chlorine holders. Said seal cap comprises two, preferably four retaining claws which engage in a swelling provided on the gas holder in order to seal said gas holder. Said retaining claws can be connected to the seal cap by means of rods with mounts, each rod having a screw thread with a lock nut at the opposite end. A seal is arranged in a groove of the seal cap, said seal consisting of a resistant material. The inventive seal cap can also have a pressure gauge, a discharge valve and handles.
