Abstract (en)

[origin: WO9855093A1] The present invention relates to a rinse-off antimicrobial cleansing composition characterized in that it comprises from 0.001 % to 5 % of an antimicrobial active, from 1 % to 80 % of an anionic surfactant, from 0.1 % to 12 % of a proton donating agent; and from 3 % to 98.899 % of water, wherein the composition is adjusted to a pH of from 3.0 to 6.0, wherein the rinse-off antimicrobial cleansing composition has a Gram Positive Residual Effectiveness Index of greater than 1.8, and wherein the rinse-off antimicrobial cleansing composition has a Mildness Index of greater than 0.3. The present invention also relates to a rinse-off antimicrobial cleansing composition which has a Gram Positive Residual Effectiveness Index of greater 1.8. The present invention also relates to a rinse-off antimicrobial cleansing composition which has a one-wash Immediate Germ Reduction Index of greater than 2.5 and a Mildness Index of greater than 0.3. The invention also relates to a rinse-off antimicrobial cleansing composition which has a Ten-wash Immediate Germ Reduction Index of greater than 2.8 and a Mildness Index of greater than 0.3. The invention also encompasses methods for cleansing skin and providing residual effectiveness versus Gram positive bacterial using these products.
