Abstract (en)

[origin: CA1097069A] ABSTRACT OF THE DISCLOSURE A wall covering has a textile element secured to a backing by a thermo-fusible material. The textile element is formed of compacted zig-zags of the warp formed by a crochet-ing machine and held on the backing by chain stitching parallel to the direction of movement in the machine. The chain stitching along the selvage edges of the element precut the backing for removal of excess backing by tearing. The cover-ing is coupled by a final step of fusing the thermo-fusible material.

Abstract (fr)

L'invention se rapporte à un procédé de fabrication d'un revêtement mural et au revêtement ainsi obtenu. Il est caractérisé en ce que ses lisières, 17, 18, la trame (4 a, 7 a) de l'élément textile (3) est maintenue par des piqûres de chaines (8, 14) et n'est pas coupée. Application à l'industrie textile et notamment des revêtements muraux de nature textile.
