Abstract (en)
[origin: CA1107531A] A high-safety container more particularly intended for dangerous products or installations, including, in combination, a tank which rests on a continuous leaktight foundation that leaves a ventilating gap beneath said tank, an external wall extending said foundation and bounding an annular space around the tank, and a filler material in said annular space which contributes to the stability of the container in respect of lifting effects caused by hydrostatic thrust even when the container is empty.
