Abstract (en)

[origin: US4637746A] A dispensing container for multicomponent adhesives and other materials in which correct proportions, amount or ratios of two or more ingredients may be dispensed from a container while keeping the two or more ingredients from mixing together prior to application of the adhesive ingredients to the work to be glued or during closure of the container after application of the adhesive ingredients to the work. The container preferably comprises a hollow right angle prism divided by a slidable, self-supporting partition or partitions parallel to the longitudinal axis of the prism and pistons or plungers attached to the slidable partition or partitions and a slidable lug operating through a slot in the container wall to slide the partition with the attached plungers upwardly or downwardly to push the adhesive ingredients out of the container or return them into the container.
