Abstract (en)

[origin: EP0004253A2] 1. A stackable tapered tube body (1) whose open end (16) is provided, for sealing closure thereof, with a sealing material on the inside at an annular sealing material section, characterised in that the tube body is provided with at least one corrugation (6) which is directed towards the axis of the tube, beside the sealing material layer (5), for protecting the sealing material when the tubes are stacked, and that the internal diameter in the region of the corrugation (6) is less than the internal diameter of the end region of the sealing material layer (5), which end region is adjacent the corrugation (6).
