Abstract (en)  
[origin: US4243163A] In a boot-jack, the danger of an injuring the uppers of boots is substantially reduced by means of a cladding (4) of elastic material having a Shore hardness of maximum 60 Shore A. The maximum surface pressure exerted is limited by a suitable height dimension of the jaws (6) which are receiving the boot and by a suitable profiling (5) the jaws (6) are well adapted to the outer shape of the boot (FIGS. 1,2).
