Abstract (en)
[origin: EP0004780A2] A connector comprises a series of slotted terminals (31) integrally joined to a carrier strip (35) mounted in an insulating housing (11) with the carrier strip (35) extending through slots (14) formed in barrier walls (13) separating adjacent terminal-receiving cavities (12) so that insulated wires can be inserted simultaneously through a wire-receiving face of the housing (11) into the slotted terminals (31) and thereby connected together.
