Abstract (en)
[origin: WO0054930A2] The invention relates to a machine tool which is simple and inexpensive to produce but which can be configured very variably and can be fitted with various machine modules. In addition, despite good chip removal properties, the inventive machine tool is suited to a simple energy supply which is relatively unsusceptible to interference, especially for the lower machine modules. The inventive machine tool has a bed on which guides are located for bearing machine modules and is characterised in that said bed is a portal bed which is elevated on at least one bed foot.
