Abstract (en)

The cladding sheet (10) is for use in an insulated wall. The cladding sheet (10) comprises a first external surface having shaped portions (18) defined thereon. The shaped portions (18) increase the adhesion and cohesion between the cladding sheet (10) and a building material to be coated thereon. The building material may be a cementitious slurry to enable brick slips or bricks to be adhered to the external surface of the wall. The shaped portions (18) on the cladding sheet (10) indicate the correct position for the rows of brick slips or bricks. The internal surface of the cladding sheet (10) also includes shaped portions (30) in order to increase the adhesion or cohesion with the internal wall. <IMAGE>
