Abstract (en)
[origin: EP0005112A1] 1. Ammunition propellant charge for all-calibre weapons designed to increase the filling coefficient of a metal or combustible casing, characterized by the fact that it is made of at least one perforated propellant associated with a monotubular propellant in mass proportions of 60 to 85% and 15 to 40% respectively, together with a coating material in a small proportion.
