Abstract (en)
[origin: EP0005144A2] The cleaning machine has a container, the base of which is inclined for the continuous passage of the castings from an end inlet opening to an opposite discharge opening and performs an oscillating movement, circulating the castings, about the longitudinal axis of the container, and has a spray device which is arranged above the container and whose cleaning jets are directed through an opening into the container, the container being a flexible, loosely sagging troughed belt (1) whose longitudinal margins (2) are fastened to an attachment (4) and whose side walls can be moved up and down in opposite directions by a drive (7) acting on the attachment. <IMAGE>
