Abstract (en)

[origin: US2003089284A1] In the case of a receiving table for container processing machines having a table top (3) which stands on feet (2) and has transport elements (T) for the containers arranged on it, the table top consists of an inclined top plate (3a) and a bottom plate (3b) which is rigidly connected to the former and together with it forms a cavity (4). The top side of the table top (3) is provided with a water-repellant coating. This greatly facilitates runoff of liquids and cleaning of the tablet plate, and yields a stable, lightweight and inexpensive construction.
