Abstract (en)

Perimetral gasket (la) to be applied on the edge of a panel or a glass pane (1b) to be installed in supporting frame (1c) may be easily fabricated in the size and length needed from a laminated ribbon-like composite article of manufacture that can be stored in rolls. <??>The laminated composite article comprises an outer sealing portion (2) of elastically deformable material covering a core portion (3) of a plastically deformable material. The core (3) is preferably a metal ribbon of aluminium, enveloped in an elastomer (2). The ribbon-like composite may be plastically deformed to realize a channel-shaped gasket (1a) to be fitted on the perimetral edge of the panel. <??>Various embodiments and processes of fabrication are disclosed. <IMAGE>
