Abstract (en)
A method for making decorative emblems, plaques, and panels comprising flow coating a clear, fluent plastics material onto the surface of a decorated substrate (12). Flow coating is accomplished with a multiple orifice nozzle (49) (or nozzles 49, 50) which is passed over the surface of the decorative substrate at a steady speed to give a uniform thickness coating of .020 to .030 inch (.508 to .762 mm). The flow coated fluent plastic is then cured and the emblems, plaques or panels are formed from the coated decorative substrate.
