Abstract (en)

[origin: WO03017303A1] The aim of the invention is to provide a switching device (1) based on a uniform control tile, which is easy to produce and assemble, ensuring good electric insulation properties. To achieve this, the device comprises an adapter (12) with second contact means (13), arranged to form a connection between first contact means (7, 8) and a conductor (10) that is to be connected. Said adapter and second contact means have insulating isolating elements (18, 18a, 18b, 18c), at least bordering several sides, for defined creepage distances and clearances.
