Abstract (en)

[origin: EP0005797A1] 1. Retaining means for filter hoses in fine dust filters, comprising a support basket (17, 18) for the filter hose, a venturi jet (10) and a clamping device for the exchangeably inserted filter hose (9), characterised in that said clamping device includes an intermediate ring (15) disposed between said venturi jet (10) and said support basket (17, 18) and having a slightly tapered outer periphery (16) for pushing on the upper rim of a filter hose (9) in accordingly expanding it and a retaining cone (12) secured at the to side of a head plate (11) of said fine dust filter (1) and surrounding the opening for receiving the support basket with the filter hose, said retaining cone (12) having a tapered inner peripheral surface (13) corresponding to the outer taper of the intermediate ring.
