Abstract (en)
[origin: EP0005836A2] 1. An inductive component onto the electrically conductive winding (1, 2) of which, there is wound a strip (4) made of soft magnetic material, characterised in that the electrically conductive winding (1, 2) is annular and that the soft magnetic strip (4) consists of an amorphous alloy and is toroidally wound onto the winding in such manner that the strip largely surrounds the winding.
