Abstract (en)

[origin: EP0005837A1] 1. Fastening device for the connecting of a wall bracket (1) fixed on the face of the building and having a web (3) protruding angularly from the face of the building, with a flat fastening rib (10) of a facing element (9), whereby the definite connection is effected by fixation of the fastening rib (10) which is lying flat against the web (3) by means of fasteners which are suitable for facing elements (9) such as rivets or threaded bolts, characterized by at least one clamping spring (4) protruding from the web (3) and being provided in addition to the fasteners, which allows insertion and preliminary fixation of the fastening rib (10) of the facing element (9) into the space, formed by the clamping spring (4) and the web (3), from the free end of the clamping spring (4).
