Abstract (en)
[origin: EP0006404A1] 1. Apparatus for deburring or rounding off the edges of flat workpieces, in which the workpieces are treated with brushes in alternating brushing directions, characterised by a clamping table (1) which serves to hold the flat workpiece (2), a brush (3) having a flat base (4) which is arranged opposite the clamping block (1), and provided with bristles (5) which are mounted vertically on the base (4) and are directed towards the workpiece, wherein the ends of the bristles contacting the workpiece surface have a maximum lateral deflection which is smaller than the deflection of the body carrying the bristles caused by the drive, and a drive (6) for effecting an eccentrically circular movement of the brush parallel to the plane of the workpiece.
