Abstract (en)
[origin: EP0006439A1] 1. Device for overlapping at the point of contact on interlocking grooves by connector rod fittings for windows, doors and the like, with a movable clip (5) fastened at one end (1') of one grooved rail (1) which in the operating position can be placed over the end (2') of an adjacent grooved rail (2), in such a manner that the clip (5) and the grooved rail (5) to which it is attached have holes (3', 3", 15) which, in the operating position of the clip (5) coincide with one another and, to fix the position of the clip (5), have a bolt (16) passed through them which can be anchored in the window or in the door, characterized by the fact that the clip (5) is connected (6) by a hinge about an axis (8) running parallel to the grooved rail plane and at right angles to the longitudinal direction of the grooved rails (1 and 2), preferably situated on the upper side thereof (10, 11).
