Abstract (en)

[origin: WO2007057004A2] The invention relates to a manual device made of a soft material which is composed of a top face and a bottom face forming an intermediate space that is embodied so as to accommodate at least one hand. At least two separate openings are provided for the fingers of the hand while areas on which stimulation zones are configured are designed at least in the area of the palm and the fingers. Also disclosed are a stimulation method and the use.
