Abstract (en)
[origin: EP0006709A1] A closure for a dispenser-container for moist tissues or the like which minimises evaporation of the tissues stored in a continuous length in the container. The closure comprises two superimposed diaphragms (6, 13) each having an opening (11, 16) therein completely out of register with the other, at least one of the openings being resiliently sealed by the other diaphragm. The tissue is drawn from the container through the two openings.
