Abstract (en)
[origin: EP0006738A1] Gelation of aqueous solutions and especially aqueous alcoholic solutions of the more active antiperspirant active compounds described in German patent application 2 700 711 and comprising a basic aluminium chloride, bromide, iodide or nitrate having an aluminium to chloride, bromide, iodide or nitrate molar ratio of from 6.5 to 1.3:1 and which compound forms in water a solution containing polymeric species of a size greater than 100 Angstroms within which species there is contained from 2 to 80% by weight of the total aluminium, is inhibited by including urea in the solution.
