Abstract (en)
[origin: EP0007526A1] 1. An input transformer (10) for wide band electrical signals transmitted over symmetrical or asymmetrical lines (11), characterized in that, the primary winding (14) is formed as a coaxial line, to the two inner terminals of which is applied the input signal and that the two ends of the screen (16) are brought out and connected to the ends of a potentiometer 17, to the tapping (18) of which is applied a reference potential.
