Abstract (en)

[origin: EP2793222A1] According to a preferred aspect of the invention, there is provided a method for automatic music jam sessions. A user is able to define in real-time a plurality of different settings which are utilized in real time and which provide instant results. In an automatic mode, the invention will pick settings autonomously, for example song part definition, tone pitch and instruments. In absence of constant user interaction, the invention enters a creative mode wherein the initial user-defined settings are varied to introduce variance into the jam session. The method also monitors data input by instruments connected and played by the user and adapts the setting selection accordingly .
