Abstract (en)
The invention related to a lighting system comprising a light source (4), at least one first optical element (1) which is designed to receive light from the light source (4), at least one second optical element (2) with the second optical element (2) being movably arranged with respect to the first optical element (1) between an interference position and a rest position wherein the second optical element (2) receives light from the light source (4) within the interference position and the first optical element (1) receives light from the light source (1) with the second optical element (2) being in its rest position, wherein the first optical element (1) is in a fixed position to the light source (4) and the second optical element (2) is arranged between the light source (4) and the first optical element (1).
