Abstract (en)

The present invention has an object to safely perform registration of a combination of a terminal which performs remote control and a controlled apparatus. A control device (10) of an indoor unit of an air conditioning apparatus, in which the indoor unit is connected with a server so as to be able to exchange information with the server over a network, is remotely controllable by an information terminal via the server, and is installed in a space to be air-conditioned, is provided. The control device (10) includes an information acquisition unit (21) for acquiring first identification information on the information terminal; an information transmission unit (22) that transmits, to the server, association information in which the acquired first identification information on the information terminal and second identification information on the indoor unit are associated with each other; and a switching unit (23) that performs switching between a registration mode, in which the association information is able to be registered in the server, and a normal mode, in which the registration mode is cancelled, the first identification information on the information terminal is not acquired by the information acquisition unit (21), and the association information is not transmitted by the information transmission unit (22).
