Abstract (en)
[origin: US4288136A] The cupboard is made from a framework comprising four tubular uprights having a square section and two rectangular or square frames. The sides of the frames are tubes having the same square section as the uprights. In the corners of each frame, the adjacent tubular members are assembled by means of oblique welded gussets. The latter permit the assembly with the uprights engaged in recesses of the frames by means of screws. The side panels are locked to the framework by a roof-cover which has folded edge portions which overlap the upper end of the panels.
