Abstract (en)

[origin: EP0009242A1] 1. A window casement with added false glazing bars of plastics hollow-section bars, which may be reinforced with metal, a pin (4) being displaceable in at least one of the ends of the bars (2), which pin engages in a hole (5) in alignment therewith in the casement frame (1) and can be moved out of engagement with this hole by means of an actuating member, characterized in that the actuating member for the pin (4) comprises a cylindrical shank (8) which is rotatable in a circular hole (9) in the outer wall (10) of the bar, with a bolt (6) which is disposed eccentrically and passes through a slot (7) in a sliding member (3) carrying the pin (4) and which is equipped with an extension (12) which fits through the slot (7), is guided for rotation in a circular hole (13) in a dividing wall (14) of the bar and engages behind this.
