Abstract (en)  
[origin: WO7900555A1] Device allowing to form hand pliers which give the possibility to seize and hold between the jaws multiple elements such as screws, units, pins, small parts, etc. These pliers are made up with two levers (1 and 2), engaging one into the other and pivoting on an axis (4). A spring (6) between the handles (3) exerts a pressure on the jaws. This pressure allows to hold multiple elements between the jaws. Detachable jaws of different sizes and shapes can be locked onto the jaws of the pliers, thereby increasing considerably the possibilities of use of these pliers. These pliers used alone or with its detachable jaws have therefore the possibility to seize, hold, insert, separate, etc. elements such as screws, nuts, pins circlips, small parts used in mechanical engineering, electricity, electronics, etc.
