Abstract (en)  
[origin: US4324445A] A refrigeration or warming cabinet having detachably assembled flat wall elements. On each flat wall element is located a plurality of groove-tongue connections formed in the connecting areas. At least one wall element has, in addition to the groove and/or tongue positions on the front side, grooves and/or tongues on one side surface. The grooves and tongues have an approximate trapezoidal cross section and run continuously along the edges of the wall elements in such a manner that in the corner areas the grooves and/or tongues of the side surfaces of one of the wall elements merges into the tongues and grooves of the front side of another of the wall elements.
