Abstract (en)

[origin: EP0009926A1] A container for dispensing flowable material through a metering orifice (7), and which orifice discharges into a duct (8), and a closure cap (1) for the container and which cap (1) presents an internal pin (12) arranged to enter into the duct (8) to terminate discharge of material from the orifice (7) without touching the orifice (7). To prevent flowable material from lodging between the pin and the duct, thus adversely affecting the closure, the duct (8), and the pin (12), have cylindrical configurations so that the pin (12) slides piston-like into the duct (8).
