Abstract (en)
[origin: FR2538333A1] Improvement to a modular vehicle of an overhead cable installation 30 consisting of additional connections by rods 36, 38 between the successive modules limiting the relative movements of the modules. Rigid panels 40 for covering the spaces between successive modules are articulated on connecting rods 36, 38 in order not to interfere with the opening of the doors in the stations with horizontal cable. The roof of the vehicle may be made from panels forming shells overlapping each other in pairs. <IMAGE>
