Abstract (en)  
[origin: EP0011124A1] 1. Door or window with an outer casing (1), a fixed field (3) attached thereto, and a sliding or sliding and tilting wing (2) displaceably mounted on the casing (1) and at least partly slidable in front of the fixed field (3) in the horizontal direction, characterized in that the upper transverse bar (8 or 12) and the lateral bars (6, 7 and 11, 13) of the casing (1) and of the sliding or sliding-and-tilting wing (2) are provided with a double channel (14 or 15) and the lower transverse bar (9) the casing (1) is provided with at least one inner channel (16) and in that the lower transverse bar (9) of the casing (1) is provided with an outer channel (17) in which a stop strip (18) is inserted, the length of which strip corresponds approximately to the width of the fixed field (3), further characterized by side closing strips (25, 26) mounted one on each vertical or longitudinal bar (6, 7) of the casing and in particular ending flush with the latter on the outside, one of which strips forms a stop strip for the fixed field (3), a head or covering/strip (31) being set in between the closing strip (25, 26) or mounted on the upper ends of the latter, which head strip in particular finishes flush with the upper transverse bar (8) of the casing (1) on the outside.
