Abstract (en)

Apparatus for spreading and feeding articles of flatwork such as sheets to an ironing machine and comprising a conveyor over which a beam with two movable clamps is arranged. The clamps are adapted to grip the article at two corners and to move apart to draw the upper edge of the article tight. The beam is stationary in order to simplify construction. Between the beam and the conveyor is a movable plate, onto which the upper edge of the article is transferred and from which plate the article is transferred to the conveyor by a movement of the plate in the moving direction of the conveyor.
